

# Problems with area and money

# Andy is going to cover a wall with tiles

The wall is in the shape of a rectangle which is 3 m wide and 2.5 m high.

The tiles are rectangles 20 cm wide and 25 cm high.

The tiles are sold in boxes and there are 20 tiles in each box.  
Each box of tiles costs £8.50

Work out the total cost of the boxes of tiles Andy needs to buy.

# Andy is going to cover a wall with tiles

The wall is in the shape of a rectangle which is 3 m wide and 2.5 m high.

**Change the units to match the tile .....**

**Find the area of the wall**

$$\text{Area of wall} = 250 \times 300 = 75000 \text{ cm}^2$$

# Andy is going to cover a wall with tiles

The tiles are rectangles 20 cm wide and 25 cm high.

The tiles are sold in boxes and there are 20 tiles in each box.

**Each tile has an area of  $25 \times 20 = 500 \text{ cm}^2$**

**A box of tiles will cover  $500 \times 20 = 10000 \text{ cm}^2$**

# Andy is going to cover a wall with tiles

**The number of boxes needed is found by  $75\ 000 \div 10\ 000 = 7.5$**

**He must buy 8 boxes**

Each box of tiles costs £8.50

Work out the total cost of the boxes of tiles Andy needs to buy.

**The cost would be  $£8.50 \times 8 = £68.00$**

Diagram NOT  
accurately drawn

The caretaker needs to polish the floor of the village hall as shown above. One tin of polish normally costs £19 and is enough to cover  $12 \text{ m}^2$  of floor.

There is a discount of 30% off the cost of the polish.

The caretaker has £130

Has the caretaker got enough money to buy the polish for the floor?

Diagram NOT  
accurately drawn

**Find the area of the floor....**

**Grey rectangle =  $16 \times 8 = 128 \text{ m}^2$**

**Red rectangle =  $7 \times 2 = 14 \text{ m}^2$**

**Floor area =  $128 - 14 = 114 \text{ m}^2$**

Diagram NOT  
accurately drawn

The caretaker needs to polish the floor of the village hall as shown above. One tin of polish normally costs £19 and is enough to cover  $12 \text{ m}^2$  of floor.

**One tin covers  $12 \text{ m}^2$**

**$114 \div 12 = 9.5$  so she would need 10 tins**

**10 tins would usually cost  $19 \times 10 = \text{£}190$**

Diagram NOT  
accurately drawn

There is a discount of 30% off the cost of the polish.

**Calculate the discount**

$$10\% \text{ of } 190 = \text{£}19$$

$$30\% \text{ of } 190 = 19 \times 3 = \text{£}57$$

**And the cost**

$$190 - 57 = \text{£}133$$

Diagram **NOT**  
accurately drawn

The caretaker has £130

Has the caretaker got enough money to buy the polish for the floor?

**Answer the question...**

**The cost is £133 so no the caretaker does not have enough money**
